SUMMARY

Frontend Engineer with 3+ years of experience building scalable, responsive web applications using React, Next.js, TypeScript, and modern frontend technologies. Specialized in crafting high-performance user interfaces with strong expertise in state management, SEO optimization, and interactive UI/UX implementation. Hands-on backend knowledge with Node.js, NestJS, and MongoDB enables seamless frontend-backend collaboration and full product understanding. Experienced in Web3 platforms, Telegram Mini Apps, and cloud deployment on AWS, translating complex design concepts into clean, maintainable, and user-focused solutions.

WORK EXPERIENCE

Frontend Engineer

IR Solutions, Islamabad, Pakistan

May 2023 – Present

- Developed production-ready frontend applications using React and Next.js with Tailwind, Ant Design, and Material UI.
- Designed and built RESTful APIs using NestJS and Node.js for multiple internal and client-facing systems.
- Built and maintained an admin dashboard in React with role-based access control, analytics, and real-time data views.
- Integrated MongoDB and PostgreSQL databases with secure authentication and optimized queries.
- Deployed and maintained applications on AWS (EC2, S3, CloudFront, and RDS).
- Led development of Telegram Mini Apps for TON-based Web3 products.
- Converted legacy static sites to Next.js, improving SEO and performance.
- Collaborated closely with designers and backend engineers to ship features end-to-end.
- Implemented state management using Redux Toolkit and React Query.

EDUCATION

Bachelor of Science in Computer Science

Oct 2019 - Oct 2023

Abbottabad University of Science and Technology

- **GRADE:** 3.91 CGPA

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, TypeScript, ReactJS, NextJS, React Query, Redux Toolkit, Ant Design, TailwindCSS, Bootstrap.

Backend: Node.js, NestJS, Express, Rest API.

Database: MongoDB.

Cloud: AWS (EC2, S3, Cloudfront), CI/CD, GitHub Actions

Payment Method: Stripe Integration.

Tools: Git, Github, Postman, Jira, Figma, VS Code.

PROJECTS

Lab (Telegram Mini App)

- Developed a full-stack decentralized exchange platform on TON blockchain enabling users to create, buy, and sell custom tokens using TON cryptocurrency.
- Implemented token creation functionality allowing users to launch unique digital assets on Stonfi, Tonco, and Dedust exchanges directly from the platform.
- Built bonding curve mechanism for dynamic token pricing based on real-time supply and demand, ensuring fair and transparent trading processes.
- Developed secure soft wallet system with deposit/withdrawal functionality, enabling users to manage TON assets and execute trades conveniently within the app.
- Integrated interactive charts and comprehensive trade history features using data visualization libraries for informed trading decisions and market trend analysis.
- Implemented referral system with automated reward distribution to incentivize user acquisition and foster community growth.

Al-Barakah Foods Management

- Developed a comprehensive web-based poultry business management platform handling multiple business units including egg production, feed manufacturing, and chicken sales operations.
- Built responsive frontend using React.js with centralized dashboard displaying real-time stats for total investment, flock management, egg production, sales revenue, and profit/loss metrics.
- Contributed to backend development using NestJS, handling order management workflows, inventory tracking and automated stock alerts for eggs and feed supplies.
- Implemented role-based access control system with Super Admin, Admin Incharge and General Management roles ensuring secure data access and operation management.
- Developed comprehensive financial management modules tracking expenses, vendor payments, buyer ledgers, and third-party payment processing with full transaction traceability.
- Integrated real-time notifications for critical operations including low stock alerts, dirty egg thresholds, payment reminders and order status updates.
- Built detailed reporting system with profit/loss statements, balance sheets, monthly income reports and date-range analytics for business insights.

Nearby

- Architected and developed a full-stack digital marketplace connecting service providers (electricians, plumbers, mechanics, cleaners) with customers seeking doorstep services.
- Built scalable backend infrastructure using NestJS with RESTful APIs handling user authentication, service provider verification, booking management, and payment processing.
- Developed SEO-optimized marketing website and service discovery platform using Next.js with server-side rendering for enhanced performance and search engine visibility.
- Created comprehensive admin panel in React.js featuring role-based dashboards for user management, provider verification workflows, booking disputes, commission configuration, and analytics reporting.
- Integrated Gemini AI for automated content generation including service descriptions, category pages, and dynamic SEO-optimized landing pages.
- Implemented real-time booking tracking, in-app communication system, and automated notification pipeline using Firebase and Twilio for push, SMS and email notifications.

- Developed secure payment gateway integration with wallet management, commission calculations, and automated payout systems for service providers.
- Built provider earnings dashboard with performance insights, ratings management, and service availability scheduling features.

Project Dragon

- Built task management platform similar to Trello with intuitive drag-and-drop interface for workflow management.
- Developed responsive frontend using React.js with seamless backend integration enabling real-time task creation, assignment, and status updates.
- Implemented user authentication, team collaboration features and project organization tools for enhanced productivity.
- Focused on platform scalability, performance optimization and delivering exceptional user experience.

Live at: <https://projectdragon.com>

Aqleh Engineering Consultancy (AEC)

- Developed corporate website for engineering consultancy firm using Next.js for superior SEO performance and fast page load times.
- Implemented dynamic animations and interactive elements showcasing AEC's infrastructure, architecture, and engineering projects.
- Created visually appealing, responsive interface highlighting firm's capabilities and project portfolio for enhanced user engagement.

Live at: <https://aqleh.com>

Muse Meal

- Built diet management platform enabling gym trainers to create, manage, and share personalized diet plans with clients.
- Developed frontend using React.js with recipe management system, client interaction features, and nutritional tracking capabilities.
- Implemented efficient data handling for meal planning, ingredient tracking, and client progress monitoring.
