SUMMARY

Frontend Engineer with 4+ years of experience building production-grade web applications across Web2, Web3, and Telegram Mini App ecosystems. Specialized in React, Next.js, and TypeScript, with deep experience integrating decentralized protocols on TON, Solana, and Ethereum. Backed by working knowledge of NestJS, MongoDB, PostgreSQL, and AWS deployment — capable of contributing end-to-end on complex products. Passionate about clean architecture, performance, and turning ambiguous requirements into polished, user-focused experiences.

WORK EXPERIENCE

Frontend Engineer

IR Solutions, Islamabad, Pakistan **May 2023 – Present**

- Led development of Web2 and Web3 single-page applications using React, Next.js, TypeScript and Tailwind CSS, delivering production-grade interfaces for enterprise and blockchain clients.
- Integrated decentralized protocols into frontend architectures using ethers.js, WAGMI hooks and RainbowKit, enabling seamless wallet connectivity and smart contract interactions across multiple chains.
- Architected and shipped Telegram Mini Apps for TON and Solana based Web3 products, working with bonding curves, token launches and soft wallet systems.
- Designed and built RESTful APIs using NestJS and Node.js, integrating MongoDB with secure authentication and optimized queries.
- Drove adoption of Next.js 13+ for static and hybrid-rendered sites, improving SEO performance, reducing page load times, and elevating overall user experience.
- Deployed and maintained applications on AWS (EC2, S3, CloudFront, RDS) with CI/CD pipelines via GitHub Actions and PM2 process management.
- Built reusable component libraries with snapshot testing, improving code consistency and reducing regression bugs across teams.
- Mentored junior developers on React best practices, Web3 integration patterns, and modern frontend architecture, helping raise the technical bar across the team.
- Collaborated closely with UI/UX designers and backend engineers to translate complex requirements into intuitive, accessible, and performant interfaces.

EDUCATION

Bachelor of Science in Computer Science **Oct 2019 - Oct 2023**

Abbottabad University of Science and Technology | CGPA 3.91 / 4.00

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Redux Toolkit, React Query, TailwindCSS, Ant Design, Material UI, Three.js, GSAP
Backend: Node.js, NestJS, Express, Rest APIs
Database: MongoDB
Cloud & DevOps: AWS (EC2, S3, CloudFront, RDS), CI/CD, GitHub Actions, PM2
Integrations: Stripe, Firebase, Gemini AI, WebSockets
Tools: Git, Github, Postman, Jira, Figma, VS Code

PROJECTS

Lab - Telegram Mini App (TON Blockchain DEX) | about.lab.pro

- Built a full-stack decentralized exchange on the TON blockchain enabling users to create, buy, and sell custom tokens using TON cryptocurrency.
- Implemented token launch functionality across Stonfi, Tonco, and Dedust exchanges, with a bonding curve mechanism for dynamic, supply-driven pricing.
- Developed a secure soft wallet system with deposit/withdrawal flows, plus interactive charts, trade history, and a referral system with automated reward distribution.

PMLA – Cinematic Projection Mapping Studio | pmlaproductions.com

- Built a scroll-driven cinematic hero on Next.js and TypeScript with chapter-based WebM playback that transitions into an interactive 3D overlay world.
- Engineered an interactive 3D projector using React Three Fiber and Three.js with a custom GLSL shader light beam, anisotropic texture filtering, and GSAP-driven scroll-bound animations.
- Implemented a custom RAF-based smooth scroll system with momentum projection, section-locking swipers and a unified event bus coordinating projector behavior across components.
- Delivered a fully responsive experience down to 390px with breakpoint-aware layouts and an iOS-specific mix-blend-mode workaround for transparent WebM playback.

Al-Barakah Foods Management | app.albarakahfds.com

- Built a comprehensive poultry business platform managing egg production, feed manufacturing, and sales operations across multiple business units.
- Developed a centralized React dashboard with real-time metrics for investment, flock management, production, sales revenue, and profit/loss tracking.
- Contributed to NestJS backend handling order workflows, inventory tracking, and automated stock alerts; implemented role-based access control across multiple admin tiers.
- Built financial modules tracking vendor payments, buyer ledgers, and third-party transactions, plus a reporting system with P&L statements and date-range analytics.

Nearby – Doorstep Service Marketplace | nearby.pk

- Architected a full-stack marketplace connecting service providers (electricians, plumbers, mechanics, cleaners) with customers seeking doorstep services.

- Built scalable NestJS backend handling user auth, provider verification, booking management, and payment processing with commission calculations and automated payouts.
- Developed SEO-optimized marketing site with Next.js SSR, and a React admin panel with role-based dashboards for provider management, disputes, and analytics.
- Integrated Gemini AI for automated content generation, plus Firebase and Twilio for real-time booking tracking and push/SMS/email notification pipelines.

365 Case Management | system.cgevolution.com

- Developed an enterprise case management system with role-based access control for billing, client management, and analytics operations.
- Built the frontend in React and Ant Design with client management modules, service assignment workflows, and real-time analytics dashboards.
- Implemented hierarchical user management enabling super admins to assign roles and access levels across organizational tiers; integrated charting and reporting tools for case analytics.

Aqleh Engineering Consultancy (AEC) | aqleh.com

- Developed an SEO-optimized corporate website using Next.js with fast page loads and dynamic animations showcasing infrastructure, architecture, and engineering projects.
- Designed a responsive, visually rich interface highlighting the firm's capabilities and project portfolio for enhanced user engagement.

Project Dragon | projectdragon.com

- Built task management platform similar to Trello with intuitive drag-and-drop interface for workflow management.
- Developed responsive frontend using React.js with seamless backend integration enabling real-time task creation, assignment, and status updates.
- Implemented user authentication, team collaboration features and project organization tools for enhanced productivity.
- Focused on platform scalability, performance optimization and delivering exceptional user experience.

Muse Meal | musemeal.ch

- Built diet management platform enabling gym trainers to create, manage, and share personalized diet plans with clients.
- Developed frontend using React.js with recipe management system, client interaction features, and nutritional tracking capabilities.
- Implemented efficient data handling for meal planning, ingredient tracking, and client progress monitoring.
